Key words: fish fauna, Miyako Group, Ryukyu Islands

Introduction

The Miyako Group of the Ryukyu Islands lie about 300 km southwest of the main island of Okinawa (Fig. 1). The group consists of 8 islands, such as the core island of Miyako-jima, Irabu-jima, Tarama-jima and other small islands. They are fringed by rich coral reefs, where dropoff with many caverns develops especially in Shimoji-jima and Irabu-jima Islands.

In 1795, C. P. Thunberg described a labrid fish, *Mullus fasciatus* [an objectively invalid name, see Eschmeyer (2006); = *Hemigymnus fasciatus* (Bloch, 1792)]. According to Schmidt (1931: 72), the locality given by Thunberg is "Meako," it means Miyako-jima Island. This record is not first for the Miyako Group, but also for the Ryukyu Islands.

A few small collections of fishes from "Miyako" were made by several authors from the end of 19th to the beginning of 20th centuries. Ishikawa & Matsuura (1897) listed 31 species belonging to 18 families in a catalog of the Imperial Museum, Tokyo. Jordan & Starks (1907) listed 14 species belonging to 11 families based on the specimens send by the courtesy of Dr. Chiromatsu Ishikawa from the Imperial Museum, Tokyo to the U. S. National Museum. Izuka & Matsuura (1920) listed 15 species belonging to 10 families exhibited in the Tokyo Imperial Museum.

After 1930's, faunal works in the Miyako Group or the Ryukyu Islands including the Miyakos were carried out many times, a number of species reported from the group: e. g., 29 species belonging to 17 families by Schmidt (1931); 96 species belonging to 33 families by Aoyagi & Nagahama (1940); 73 species belonging to 22 families by Aoyagi & Nagahama (1941); 99 species belonging to 32 families by Aoyagi (1941b); 94 species belonging to 15 families by Aoyagi (1943); 49 species belonging to 23 families by Kamohara (1964); 49 species belonging to 22

families by Yamakawa (1979). On the other hand, taxonomic studies of some fish species or families were also published as same as faunal works: e. g., Aoyagi (1941a, 1941c, 1949a, 1949b, 1952, 1954a, 1954b, 1955) and Kamohara (1963a, 1963b).

As mentioned above, many species were reported from the Miyako Group, but it is difficult to give a recent taxonomic status for each species in the case of most because of their insufficient diagnosis except Dr. Hyoji Aoyagi's collection reexamined by Hayashi (1995). Recently, Senou *et al.* (2006b) analyzed zoogeographically fish faunas of 12 sites under the influence of the Kuroshio Current, revealed that the fish fauna of the Miyako Group is most similar to that of Ishigaki-jima Island. They gave a table of the fishes of the group, but indicated only the number of species belonging to each family (792 species belonging to 75 families in 17 orders).

In this paper, we provide a comprehensive species list of coastal fishes from the Miyako Group on the basis of our recent survey.

Methods

Study areas are coral reefs, bays, harbors and tide pools around the Miyako Group, including a group of coral reefs called as Yabiji (Yaepishi or Yaebishi) located in north of Ikema-jima Island.

The list of fishes was mainly compiled from a large number of photographs (4149 images including 3960 underwater photographs in total) registered in the Image Database of Fishes in the Kanagawa Prefectural Museum of Natural History (KPM-NR).

Additionally, a small collection of fishes from the group deposited in the museum (KPM-NI) was included. We tried to cover as many as possible on literature sources, but some fishes recorded from offshore areas were excluded: e.g., *Prognichthys sealei* Abe, 1955, *Pristigenys meyeri* (Günther, 1872), *Meganthias kingyo* (Kon, Yoshino et Sakurai, 2000), etc. Fishes with uncertain taxonomic status in early taxonomic and faunal works were also excluded.

The systematic arrangements of families followed Nakabo, ed. (2002). Scientific names generally followed Nakabo, ed. (2002) with some modifications by recent taxonomic studies. Species in each family were arranged in alphabetical order of species names. Authorship and published year followed Eschmeyer (2006) except for the date of publication of "Fauna Japonica" by Temminck & Schlegel published in 1843-1850 in which we followed Nakabo, ed. (2002: 1652). Standard Japanese names (*sensu* Senou, 2002) followed Nakabo, ed. (2002), and were transliterated in the Hepburn system. Each standard Japanese name was showed in a square brackets following a scientific name.

The following "Species List" includes 863 species belonging to 82 families in 17 orders, and species allocation to families are shown in Table 1.

摘要

Senou, H., Y. Kobayashi & N. Kobayashi, 2007. Coastal Fishes of the Miyako Group, the Ryukyu Islands, Japan. *Bull. Kanagawa prefec. Mus. (Nat. Sci.)*, (36): 47-74. (瀬能 宏・小林洋子・小林延行, 2007. 宮古諸島の沿岸魚類. 神奈川県立博物館研究報告 (自然科学), (36): 47-74.)

琉球列島の宮古諸島の沿岸魚類相を明らかにする目的で、神奈川県立生命の星・地球博物館に所蔵されている標本と、同館の魚類写真資料データベースに登録されている画像（主に水中写真）を基に魚類目録を作成した。目録には文献による記録も必要に応じて追加した。その結果、同諸島の魚類は少なくとも 17 目 82 科 863 種に達することが判明した。科別の種数ではハゼ科の 146 種を筆頭に、ベラ科 (97 種)、スズメダイ科 (83 種)、テンジクダイ科 (45 種)、ハタ科 (34 種)、チョウチョウウオ科 (33 種)、イソギンポ科 (32 種)、ブダイ科 (26 種)、ニザダイ科 (25 種)、ヨウジウオ科 (19 種) と続き、上位 10 科で全体の 62.6% を占めていた。本研究により、同島の沿岸魚類相はほぼ解明されたと考えられる。
